

# Commissioning Management

EPC Power Management is a unique company that combines high level knowledge with stable manpower. We have been providing structured and stable results in technical complex environments. We do not just provide people: we provide solutions

## Making it work

The final stage in the process just before the start-up of any complex industrial installation is the Commissioning Process. After the construction stage we often see that there is a need to speed up the final stage of the project and correct all the issues that have not been clearly defined at the beginning of the project.

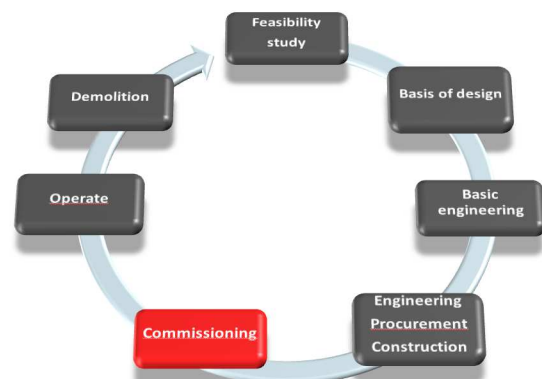

EPC Power has specialised commissioning engineers and commissioning managers to finalize this process for you in the best possible way. We developed commissioning plans and handbooks that can be easily adapted to your situation: we have been leading

and executing commissioning processes in projects in between € 5 million and € 1.8 billion, so whatever the size of your project is: we have the proper experience to make it happen.

### Advantages of the EPC commissioning approach:

- Detailed procedures and well developed manuals;
- Experienced managers and engineers;
- Ready-to-use document control systems;
- Knowledge of all necessary regulations;
- Emphasis on quality and safety;
- Strong and reliable contacts with notified bodies;
- Holistic approach, based on thorough knowledge of previous steps in the process

In many cases, we also manage other important disciplines within the project. In these cases the commissioning process is usually very well integrated in the circle of activities that leads to operation of your industrial installation.

## Key characteristics of the EPC Power Management commissioning process:

- Always a well detailed and guaranteed plan
- Highly trained and experienced staff
- Strong document management systems
- Well-connected team to solve any problem;
- Focussed on solving the problem, not being at home on time
